## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-17 rejected under 35 U.S.C. 103(a) as being unpatentable over Hung et al (4,139,302) in view of Solomon (5,675,412).

As for claim 1, Hung et al (Hung hereinafter) shows an interferometer comprising:
an optical circuit with one or more optical components showing high
susceptibility to noise;

a shielding unit (12).

Page 3

As for claims 2-6, Hung shows that it is known in the prior art that using heavy damped tables and at the time of the invention, one of ordinary skill in the art would have utilized a heavy damped table in order to isolate the interferometer form external vibrations (column 2, lines 1-5).

As for claims 7, 12, 13, and 16, Solomon shows the use of additional damping devices and materials and at the time of the invention, it would have been obvious to one of ordinary skill in the art to place an additional damping device between the optical circuit and the shielding unit as it would have been well within the skill level of a skilled artisan to use various damping materials in different shapes, including rubber sheets, or other damping devices in between the shielding unit and the optical circuit in order to further isolate the interferometer from any vibration passing through the heavy damped table.

As for claim 8, the optical circuit is an interferometer (column 2, lines 51+).

As for claims 9-11 and 17, it would have been obvious to one of ordinary skill in the art to use a receiving device into order to place the sample in the interferometer, whether it is just the table (12) or any other means to hold the sample. In the instant case, the sample (10) is placed outside (on top) of shielding unit (12).

As for **claim 14**, the components of the interferometer provide substantially no vibration.

As for claim 15, Hung shows all element as claimed in claim 1 in addition to:

an optical signal source (22) and

an optical receiver (28).

Art Unit: 2877

## BEST AVAILABLE C

Papers related to this application may be submitted to Technology Center (TC) 2800 by facsimile transmission. Papers should be faxed to TC 2800 via the PTO Fax Center located in CP4-4C23. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The CP4 Fax Center numbers are 703-872-9318 for regular communications and 703-872-9319 for After Final communications

If the Applicant wishes to send a Fax dealing with either a Proposed Amendment or for discussion for a phone interview then the fax should:

- a) Contain either the statement "DRAFT" or "PROPOSED AMENDMENT" on the Fax Cover Sheet; and
- b) Should be unsigned by the attorney or agent.

  This will ensure that it will not be entered into the case and will be forwarded to the examiner as quickly as possible.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew Hwa Lee whose telephone number is (703) 305-0538. The examiner can normally be reached on M-Th. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank Font can be reached on 703-308-4881.
